THE PHYSICS OF METALS AND METALLOGRAPHY
FIZIKA METALLOV I METALLOVEDENIE

VOLUME 51, No. 2, 1981

Chief Editor:
S. V. VONSOVSKII

Deputy Chief Editor:
V. I. ARKHAROV

EDITORIAL BOARD:

V. I. ARKHAROV, A. N. ORLOV, S. V. VONSOVSKII, V. A. PAVLOV, V. D. KUZNETSOV, V. D. SADOVSKII, G. V. KURDYUMOV, R. I. IANUS, B. G. LAZAREV, YA. S. SHUR, A. G. LESNIK

Translation Editor:
Professor J. Christian

Translator:
V. Alford

The Physics of Metals and Metallography is a cover-to-cover translation of *Fizika metallov i metallovedenie* and is published monthly by Pergamon Press in collaboration with the Board of Governors of Acta Metallurgica.

Issued monthly. Two volumes per annum consisting of six issues each and containing approximately 200 pages per issue.

Publishing and Advertising Offices

Pergamon Press Ltd., Headington Hill Hall, Oxford OX3 OBW, England
Pergamon Press Inc., Maxwell House, Fairview Park, Elmsford, NY 10523, U.S.A.

Annual Subscriptions (1982) are:

To Libraries, Research Establishments, all other multiple-reader institutions and individuals, $500.00 including postage and insurance. Two year subscription rate (1982/1983): $ 950.00.
To members of co-operating and sponsoring societies of Acta Metallurgica, $25.00 including postage.

Subscriptions are only serviced after payment has been received, and are not accepted for less than one year.

Subscription enquiries from customers in North America should be sent to: Pergamon Press Inc., Maxwell House, Fairview Park, Elmsford NY 10523, U.S.A., and for the remainder of the world to: Pergamon Press Ltd., Headington Hill Hall, Oxford OX3 0BW, U.K.

Microform Subscriptions and Back Issues:

Back issues of all previously published volumes are available in the regular editions and on microfilm and microfiche. Current subscriptions are available on microfiche simultaneously with the paper edition and on microfilm on completion of the annual index.

SUBJECT INDEX

Bold figures indicate the issue

Absorption of light in a crystal of EuO under ferromagnetic resonance conditions **6,** 16
Ageing of an iron–copper alloy and of low-carbon martensitic steel with copper **5,** 173
– of carbon-free martensite of Fe–Cr–Ni–Co–Mo–Ti steels, investigation of the – **3,** 98
Alloy Al–Cu–Mg, structures of the zones in – **3,** 80
– Au–30 at.% Ni. Diffuse electron and X-ray scattering and feature of the structural state of – **3,** 154
–, austenitic, after thermomechanical treatment. Investigation of the elastic modulus of an – **5,** 133
–, binary, in the method of completely orthogonalized plane waves **5,** 1
– Co_4CuCe, study of the crystalline structure and magnetic parameters of – **2,** 187
– D16, aluminium, investigation of the decomposition of the supersaturated solid solutions in – **4,** 57
–, dispersion hardening in a titanium–niobium–tantalum–germanium – **3,** 104
– Fe–3% Si, initial state of, influencing the processes of structure and texture formation during alternating cycles of deformation and recrystallization **1,** 109
–, high-purity iron–chromium, "475" embrittlement and the impact toughness of a – **1,** 191
–, iron–cobalt, oxidation and the domain structure of condensed films of iron and – **3,** 31
–, Mo–0·63% Zr–0·06% C, quenched and deformed, during heating – **3,** 88
–, molybdenum–rhenium, MR47-VP. Evolution of dislocation structure and development of fatigue damage in – **4,** 169
– Nb–1% Zr–0·1% C, peculiar features in the failure of – **6,** 136
– nickel–aluminium–chromium, age-hardening – **5,** 150
–, nickel–vanadium, temperature dependence of coefficients of mutual diffusion in the phase transition range of a – **1,** 173
–, ordered, influence of elastic stresses occasioned by changes in lattice parameters on the mechanical properties of an – **1,** 155
–, ordering, Fe–47 at.% Pd, permanent magnets based on – **4,** 46
– $SmCo_5$, high-temperature heat capacity and kinetic properties of – **6,** 162
Alloys based on iron and nickel, coherent particles of γ' phase in martensite and their influence on the $\alpha \rightarrow \gamma$ transformation in – **6,** 166
–, binary, based on lead and molybdenum and produced by the method of low-temperature condensation. Superconductivity of films of – **5,** 41
–, binary, electron-phonon interaction and the superconductive transition point in vanadium, niobium and tantalum based – **6,** 78

– , cobalt, influence of phase transformations on diffusion and the mechanical properties of – **2,** 136
– Cu_2MnAl and Fe_2MnAl plastically deformed ordered. Domain structure of – **4,** 145
– , disordered, concentration dependence of the superconductive transition point of – **6,** 159
– , ferromagnetic. Resistivity of binary ordering – **3,** 20
– , iron–carbon, influence of hydrogen on the eutectoid transformation in – **3,** 183
– , iron–cobalt. Calculation of the magnetostriction and equilibrium arrangement of the magnetization vector in films of – **5,** 28
– , iron–manganese, with an f.c.c. lattice. Elastic modulus anomaly in iron–manganese – **6,** 55
– , iron, nickel during plastic deformation. Influence of hydrostatic pressure on the phase formation process of – **4,** 88
– , iron–nickel, internal friction maxima after the reverse martensitic transformation in – **1,** 141
– , manganese–copper, spinoidal decomposition in – **4,** 97
– , metastable austenitic. Strengthening of – by cycles of $\gamma-\alpha-\gamma$ transformations **4,** 158
– , nickel, with 3*d* and 4*d* metals. Low-temperature resistivity of – **5,** 163
– , nickel–titanium and titanium-based – . Structural transformations, physical properties and memory effect in the – **3,** 49
– of manganese with germanium and gallium **3,** 161
– of titanium with vanadium, niobium and tantalum, width of superconductive transitions **2,** 37
– of zirconium with dysprosium. Substructure of plastically deformed – **4,** 179
– , ordered, with an Ll_2 type structure. Anomalies of the temperature dependence of the deformation parameters of – **4,** 117
– , ordered, with hexagonal close packing **6,** 6
– , ordering, with any degree of interstitial site occupation. Diffusion of interstitial atoms in – **5,** 59
– , steel, with aluminium. A study of the orientations of carbide Fe_xC precipitated in – **6,** 182
– , structure of ceramic coated ribbons of soft magnetic – **6,** 102
– , ternary ordering. On the distribution of iron, nickel and aluminium atoms in sublattice sites of – **5,** 97
– , ternary with formation of a β-brass type of lattice. Ordering in – **6,** 82
– , zirconium-based. The formation of phases precipitated from the solid solutions in – **2,** 98
Aluminium in torsion, investigation of the mechanism of creep and failure of – **2,** 167
– , monocrystalline, influence of impurity silver on high-temperature creep of – **3,** 132
Aluminium–germanium, system, influence of high pressures on phase equilibria in the – **3,** 58
Americium, high-temperature X-ray study of phase transition in – **5,** 193
Anisotropic components of the local magnetic field in an ordered alloy iron–palladium **4,** 40
Anisotropy of free surface energy of metallic crystals with an f.c.c. structure. Computer modelling of the – **1,** 80

– , single-ion, of the easy axis type influencing the phase diagram of a magnet with random exchange interactions of different signs **6,** 27
– , uniaxial magnetocrystalline, alloy iron–palladium, ordered with – **4,** 40
Annealing on the structure and mechanical properties of a β-III titanium alloy in the aged state **5,** 83
– twin boundaries in silver films, structural investigation of – **3,** 146
Anomalies of the temperature dependence of the deformation parameters of ordered alloys with an Ll_2 type structure **4,** 117
Anomaly, elastic modulus, in iron–manganese alloys with an b.c.c. lattice **6,** 55
Antiferromagnet with impurities. Critical behaviour of disordered magnetic systems **1,** 17
Asymmetry of a ferromagnetic resonance curve. One possible mechanism of the – **3,** 186
Atoms, interstitial, in ordering alloys with any degree of interstitial site occupation **5,** 59
Austenite and martensite, influence of soaking after hot deformation on the structure and strength of – **3,** 93
– , hot-deformed, different diffraction methods of investigating the substructure of – **4,** 61
– , iron–nickel, with a high nitrogen content and alloyed with nitride formers. Crystal structure of – **5,** 90
– lattice of steels and alloys near the starting point of the martensitic transformation. X-ray diffraction analysis of the state of the – **2,** 85
– , supercooled, influence of a steady magnetic field on the diffusion decomposition of – **2,** 189

Ba–Cd and Mo–W, systems, calculation of short-range order in – **5,** 167
Bands, conduction, indirect exchange interaction across narrow – **2,** 184
Barkhausen, discontinuity, magnetic state of high-anisotropy ferromagnets after a large – **3,** 175
Behaviour, critical, of disordered magnetic systems. I. A binary ferromagnetic alloy **1,** 9
– , critical, of disordered magnetic systems. II. Antiferromagnet with impurities **1,** 17
– , critical of disordered magnetic systems. III. Binary alloy with mixed exchange interaction **2,** 14
Binary alloy with mixed exchange interaction. Critical behaviour of disordered magnetic systems **2,** 14
– ferromagnetic alloy. Critical behaviour of disordered magnetic systems **1,** 9
Boundaries, non-equilibrium, of edge domains. Velocity of – **3,** 27
– , polygonal, in single crystals of silicon iron. Formation of – **5,** 115
– , twin, in silver films. Structural investigation of annealing – **3,** 146
Boundary migration rate of secondary recrystallization grains. Temperature dependence of the – **2,** 114
Buildup of damage under load. Question of the life of a material and the – **2,** 155
Bulk diffusion of cobalt and tungsten in nickel **6,** 94

Calculation of the electron density of states of liquid metals **2,** 159
Carbide Fe_xC precipitated in steel alloys with aluminium **6,** 182
–, niobium, high-temperature creep of monocrystalline – **3,** 142

– phases in C–Fe–Cr–V and C–Fe–Cr–Nb alloys. X-ray spectral micro-analysis of – 1, 64
Carbonitrides, vanadium and niobium, in a deformed low-carbon steel. Composition of – 4, 107
Cells and dendrites. Growth shape intermediate between – 4, 93
Chromium, carbidized, on the mechanism of the high-temperature oxidation of protective coating of – 4, 112
Clusters of diffusing material on matrix defects. Formation of – 2, 26
Coercive force of magnets made of $SmCo_5$. Influence of heat treatment on the temperature dependence of the – 3, 36
– of sintered RCo_5 magnets. Periodic structure and – 6, 62
Coherent particles of γ' phase in martensite and their influence on the $\alpha \rightarrow \gamma$ transformation in alloys based on iron and nickel 6, 166
Comparison of electron microscopic and X-ray data on variation in the dislocation density of a copper–nickel alloy during deformation 2, 171
Compensation surfaces. On the remagnetization of amorphous iron–gadolinium films with – 1, 58
Components in the eutectic W–ZrC. Peculiarities of the distribution of – 3, 63
Composition and conditions of recrystallization on the microstructure of a eutectic composite of copper–chromium 6, 87
– of vanadium and niobium carbonitrides in a deformed low-carbon steel 4, 107
Condensation, low-temperature, resistivity of nickel–aluminium films produced by – 3, 163
–, low-temperature, superconductivity of films of binary alloys based on lead and molybdenum and produced by the method of – 5, 41
Cone helix magnetic structure, reflection of elastic waves by magnets with a – 1, 1
Constant coefficient, model of, used for describing the diffusion in a solid 2, 176
Copper–antimony, intergranular cold shortness mechanisms of f.c.c. solid solutions of – 3, 127
Copper–chromium, eutectic composite of, influence of composition and conditions of recrystallization on the microstructure of a – 6, 87
Correlation of the phase diagrams of binary systems *d*-elements of the IV–VII and *p*-elements of the III–V groups of the periodic table 4, 1
Creep and rupture. Influence of the structure of steel 15Kh1M1F on the processes of – 5, 102
–, high-temperature, kinetics of deformation twin development in iron during – 5, 108
–, high-temperature, of monocrystalline aluminium. Influence of impurity silver on – 3, 132
–, high-temperature, of monocrystalline niobium carbide 3, 142
–, high-temperature, the rate of, influence of width of dislocation dissociation on the rate of – 3, 137
–, mechanism of, and failure of aluminium in torsion 2, 167
–, metal, hydrostatic pressure on the different stages of – 6, 171
– rate for metals with and f.c.c. lattice. Stress dependence of the – 3, 123
Crystal containing an excess of dislocation walls of one sign. Theory of the broadening of X-ray reflections from a – 2, 1

– lattice structure of the martensite produced by deformation of the metastable austenitic steel 70Kh5G4 1, 99
– of EuO under ferromagnetic resonance conditions. Absorption of light in a – 6, 16
Crystalline and amorphous magnetic films. Ferromagnetic resonance in – 1, 47
– structure and magnetic parameters of alloy Co_4CuCe 2, 187
Crystallographic X-ray analysis of the order–disorder phase transition in the alloy Ni_4Mo 2, 75
Crystals, single, influence of the purity of silver – on the temperature dependence of the yield point 5, 120
–, single, of age-hardening alloys AlZn at the zonal stage of decomposition 2, 156
–, single, of copper–aluminium α solid solutions in the range 4·2–300 K 4, 151
–, single, of copper and aluminium under static and dynamic stresses 1, 177
–, single, of high-purity tungsten. Radial distribution of structural defects in – 4, 165
–, single, of nickel–molybdenum solid solutions. Structure and the strength parameters of – 3, 178
–, single, of silicon iron. Formation of polygonal boundaries in – 5, 115
–, single, of zinc. Plasticity of – under the conditions of hot deformation 6, 153
–, single, peculiarities of slip geometry in – of Fe–3% Si oriented for shear in the anti-twinning direction 5, 127
–, single, work hardening of – of age-hardening alloy nickel–aluminium–chromium 5, 150
–, $SmCo_4Cu$, of heterogeneous composition. Domain structure and remagnetization of – 2, 44
Cycles of $\gamma-\alpha-\gamma$ transformations during rapid heating. Strengthening of metastable austenitic alloys by – 4, 158

Decay of spin waves in ferromagnetic metals. On the influence of *s–d* exchange interaction on the – 5, 6
Decomposition of solid solution of yttrium in zirconium 1, 168
– of the β solid solution in an $(\alpha+\beta)$ titanium alloy 2, 80
– of the supersaturated solid solution in aluminium alloy D16 4, 57
–, spinoidal, in manganese–copper alloys 4, 97
Defects, macroscopic, in metal–metal film structures 2, 90
Deformation and recrystallization. Influence of the initial state of alloy Fe–3% Si on the processes of structure and texture formation during alternating cycles of – 1, 109
–, cold, by annealing on the structure and mechanical properties of a β-III titanium alloy in the aged state 5, 83
–, cold, structure of solid solutions of titanium-based alloys with a b.c.c. lattice and formation of tetragonal phase during – 1, 120
–, hot, on the structure and strength of austenite and martensite, influence of soaking after – 3, 93
–, hot, plasticity of zinc single crystals under the conditions of – 6, 133
– parameters of ordered alloys with an Ll_2 type structure. Anomalies of the temperature dependence of the – 4, 117

–, plastic. Influence of hydrostatic pressure on the phase formation process of iron–nickel alloys during– **4,** 88
–, plastic, of iron during the $\gamma \rightarrow \alpha$ phase transition. Kinetic aspects of – **1,** 137
–, plastic, of packet martensite. Low-carbon steel. Development of – **4,** 80
– substructure of cold rolled stainless steel. Impact toughness and – **5,** 138
–, tensile, structure and mechanical properties of metastable chromium-manganese steels after tensile deformation **5,** 53
– waves coupled with spin density waves in chromium **5,** 46
Dependence of vacancy porosity on irradiation dose, lattice of voids in molybdenum and – **6,** 169
Description of the diffusion in a solid, with the model of constant coefficients **2,** 176
Determination of the anisotropic component of the local magnetic field in an ordered alloy iron–palladium with uniaxial magnetocrystalline anisotropy **4,** 40
– of the rotation of the polarization plane and ellipticity of ultrasonic waves in magnetically polarized media **2,** 19
Development of plastic dofermation of packet martensite. Low-carbon steel **4,** 80
Diffraction methods, different, of investigating the substructure of hot-deformed austenite **4,** 61
– of X-rays by single crystals of age-hardening alloy AlZn at the zonal stage of decomposition **2,** 156
Diffuse electron and X-ray scattering and features of the structural state of alloy Au–30 at.% Ni **3,** 154
Diffusion and the mechanical properties of cobalt alloys. Influence of phase transformations on – **2,** 136
– crack growth in a polycrystalline material **1,** 185
– decomposition of supercooled austenite **2,** 189
– in a medium plastically deformed by direct extrusion **5,** 185
–, mutual, in the phase transition range of a nickel–vanadium alloys temperature dependence of coefficients of – **1,** 173
–, mutual, in the system nickel–vanadium **3,** 188
– of ^{140}Ba and ^{132}Te in molybdenum **1,** 165
– of interstitial atoms in ordering alloys with any degree of interstitial site occupation **5,** 59
– of palladium and platinum in gold **1,** 163
– of vacancies during plastic deformation of metal. Possibility of using stimulated electron emission to investigate the – **3,** 170
– processes in a plastically deformed mixture of zinc and copper. Features of – **5,** 66
– zone, dependence of volume self-diffusion parameters in tungsten on the purity level of the – **4,** 102
Diffusional $\gamma \rightarrow \alpha$ transformation, formation of vanadium carbonitrides during the – **2,** 49
Direct observation of the initial stages in the structural recovery of rolled metals with an f.c.c. lattice during annealing in a high-voltage electron microscope **6,** 114
Directions, in minor crystallographic, Doppler-shifted acoustic cyclotron resonance in – **3,** 180
Dislocation dissociation, width of, influencing the rate of high-temperature creep **3,** 137
– distribution in intersecting clusters in crystals with cubic symmetry **1,** 21

– orientation, influence of preferred – on the heat resistance of steel 12KhlMF 2, 131
– structure and mechanical properties of Armco iron reduced in a flat rolling mill 4, 140
Dislocations, continuously distributed. On the kinetics of – 4, 24
–, edge, in metals with f.c.c. and b.c.c. lattices. Computer modelling of elementary events of self-diffusion along – 1, 85
– in an elastically nonlinear medium. I. 6, 143
Disordered magnetic systems. I. A binary ferromagnetic alloy. Critical behaviour of – 1, 9
Dispersion hardening Fe–Ni Elinvars, structural transformation in – 2, 62
– hardening in a titanium–niobium–tantalum–germanium alloy 3, 104
Distribution function in liquid metals, pseudopotential calculation of the radial – 5, 18
– of iron, nickel and aluminium atoms in sublattice sites of ternary ordering alloys 5, 97
– of magnetization in films with a stripe domain structure. Two-dimensional model of the – 1, 37
– of martensite with abnormally high tetragonality 3, 68
Domain structure and remagnetization of $SmCo_4Cu$ crystals of heterogeneous composition 2, 44
– structure of condensed films of iron and an iron–cobalt alloy 3, 31
– structure of plastically deformed ordered alloys Cu_2MnAl and Fe_2MnAl 4, 145
– structures of polyaxial monocrystalline ferromagnetic films with a (111) surface 6, 66
– walls in a constant magnetic field. Motion of – 6, 34
Domains, dynamic, and integral pulse parameters of thin iron-nickel films 6, 48
–, edge, velocity of non-equilibrium boundaries of – 3, 27
Doppler-phonon resonance range. Rotation of the polarization plane and ellipticity of ultrasonic waves in tungsten in the – 4, 188
Doppler-shifted acoustic cyclotron resonance in minor crystallographic directions 3, 180

Effective elastic modulus of porous and lead-filled composites based on nickel 6, 174
Effects, Hopkinson, in nickel 2, 180
Elastic modulus of an austenitic alloy after thermomechanical treatment 5, 133
– waves by magnets with a cone helix magnetic structure. Reflection of – 1, 1
Electron diffraction analysis of the redistribution of components in two-phase iron–nickel films 4, 184
– diffraction investigations of deformation waves coupled with spin density waves in chromium 5, 46
– emission to investigate the diffusion of vacancies during plastic deformation of metal 3, 170
– field with paramagnetic impurities, spin waves in an – 5, 198
– microscopic analysis of grain boundaries in iron, molybdenum and stainless steel 2, 147
Electrons, conduction, in metals. Towards a theory of positron thermalization on – 5, 13
–, 4*f*, in ferromagnetic europium oxide. Optical orientation of – 4, 17
d-**Elements** of the IV–VII and *p*-elements of the III–V groups of the periodic table 4, 1
Elinvars, structural transformation in dispersion hardening Fe–Ni – 2, 62
Ellipticity of ultrasonic waves in magnetically polarized media. Determination of the rotation of the polarization plane and – 2, 19

– of ultrasonic waves in tungsten in the Doppler-phonon resonance range. Rotation of the polarization plane and – 4, 188
Embrittlement, "475" C, and the impact toughness of a high-purity iron–chromium alloy 1, 191
– of niobium alloy VN2AE, influence of nitriding on the heat resistance and – 2, 141
Entropy of non-transition metals in the liquid state. On the electron component of the – 5, 177
Equality of the static and dynamic elastic moduli in metals at finite temperatures 4, 6
Equiatomic alloy Fe–Pd under load. Ordering of – 1, 196
Equilibrium arrangement of the magnetization vector in films of iron–cobalt alloys 5, 28
Europium oxide, ferromagnetic, optical orientation of 4*f* electrons in – 4, 17
Eutectic Co(Cr, Ni)–TaC, deformed fibrous – 2, 67
– , directional, Co(Cr, Ni)–TaC. Influence of thermal cycling on the mechanical properties and structure of – 1, 147
– W–ZrC, peculiarities of the distribution of components in the – 3, 63
– $\gamma/\gamma' - \delta$ with an oriented structure. Influence of thermal cycles on the strength and plasticity of – 5, 195
Eutectics, investigation of the structure of monovariant directionally crystallized cobalt–aluminium–niobium – 1, 198
– , oriented, Te–Bi_2Te_3 and Te–Sb_2Te_3. Influence of phase size on the microhardness of – 1, 131
Evolution of dislocation structure and development of fatigue damage in molybdenum–rhenium alloy MR47-VP 4, 169
Extrusion, direct, diffusion in a medium plastically deformed by – 5, 185

Failure of metals subjected to powerful ultrasonics 3, 173
Fatigue damage, development, in molybdenum–rhenium alloy MR47-VP 4, 169
Features of the influence of hydrostatic pressure on the different stages of metal creep 6, 171
– of the magnetic state of high-anisotropy ferromagnets after a large Barkhausen discontinuity 3, 175
Fermi surface of ruthenium influenced by pressure 2, 174
Ferrite, formation of transformation microtwins in – 2, 55
Ferro- and antiferromagnets, one-dimensional. Possibility of thermodynamically stable long-range order in – 6, 21
Ferro-antiferromagnetic transformation in the system of ordered alloys $Fe_xMn_{1-x}Pt_3$ at 4·2 K 1, 51
Ferromagnetic metals. On the influence of *s–d* exchange interaction on the decay of spin waves in – 5, 6
– resonance conditions. Absorption of light in a crystal of EuO under – 6, 16
– resonance curve, one possible mechanism of the asymmetry of a – 3, 186
Film structures, macroscopic defects in metal–metal – 2, 90
Films, condensed, of iron and iron–cobalt alloy. Domain structure of – 3, 31
– , iron–nickel, thin, dynamic domains and integral pulse parameters of – 6, 48
– , polyaxial monocrystalline ferromagnetic, with a (111) surface. Domain structure of – 6, 66
– , polycrystalline niobium, superconductivity parameters of – 6, 43

Fine structure of metastable solid solutions produced at super high rates of crystallization 5, 203
Finite temperatures, equality of the static and dynamic elastic moduli in metals at – 4, 6
Flat rolling mill, dislocation structure and mechanical properties of Armco iron reduced in a – 4, 140
Flow stress of nickel–silicon oxide composites influenced by strengthening phase 2, 165
Formation of a long-period ordered phase in a two-dimensional lattice 4, 72
– of clusters of diffusing material on matrix defects 2, 26
– of transformation microtwins in ferrite 2, 55
– of vanadium carbonitrides during the diffusional transformation 2, 49
Friction in nickel, internal. Influence of magnetic field orientation on – 5, 191
–, internal, maxima after the reverse martensitic transformation in iron–nickel alloys 1, 141

Grain boundaries in iron, molybdenum and stainless steel. Electron microscopic analysis of – 2, 147
Grains, secondary recrystallization. Temperature dependence of the boundary migration rate of – 2, 114
Growth shape intermediate between cells and dendrites 4, 93

Heat resistance of deformed fibrous eutectic Co(Cr, Ni)–TaC 2, 67
– resistance of steel 12Kh1MF, influence of preferred dislocation orientation on the – 2, 131
– treatment, influence of – on the temperature dependence of the coercive force of magnets made of $SmCo_5$ 3, 36
Heating, structural changes of the quenched and deformed alloy Mo–0·63% Zr–0·06% C during – 3, 88
Hexagonal close packing, structures of ordered alloys with – 6, 6
High-pressures influencing phase equilibria in the system aluminium–germanium 3, 58
Hydrogen-induced precipitation hardening of palladium 3, 41
Hydrogen isotopes in metals with an f.c.c. lattice. Calculation of the diffusion coefficients of – 1, 159
– pressure of up to 23 kbar on the $\varepsilon \rightarrow \gamma$ transformation point of alloy Fe+22% Mn 5, 170

Impact toughness and deformation substructure of cold rolled stainless steel 5, 138
Impurity hydrogen in niobium, and lattice deformation. Screening of – 3, 11
– silver, influence of, on high-temperature creep of monocrystalline aluminium 3, 132
Influence of a steady magnetic field on the diffusion decomposition of supercooled austenite 2, 189
– of certain factors on the width of superconductive transitions in alloys of titanium with vanadium, niobium and tantalum 2, 37
– of elastic stresses occasioned by changes in lattice parameters on the mechanical properties of an ordered alloy 1, 155
– of magnetic field orientation on internal friction in nickel 5, 191
– of nitriding on the heat resistance and embrittlement of niobium alloy VN2AE 2, 141

– of plastic deformation on the structure of twinned martensite in iron alloys 1, 68
– of pressure on the Fermi surface of ruthenium 2, 174
– of structure on internal friction during the polymorphic transformation in cobalt 6, 109
– of the purity of silver single crystals on the temperature dependence of the yield point 5, 120
– of the strengthening phase on the flow stress of nickel–silicon oxide composites 2, 165
– of the structure of steel 15Kh1M1F on the processes of creep and rupture 5, 102
– of thermal cycling on the mechanical properties and structure of directional eutectic Co(Cr, Ni)–TaC 1, 147
– of width of dislocation dissociation on the rate of high-temperature creep 3, 137
Interaction, electron-phonon, and the superconductive transition point in vanadium, niobium and tantalum-based binary alloy 6, 78
–, indirect exchange, across narrow conduction bands 2, 184
–, *s–d* exchange, on the influence of – on the decay of spin waves in ferromagnetic metals 5, 6
Intergranular cold shortness mechanisms of f.c.c. solid solutions of copper–antimony 3, 127
